

Eco Bags Synopsis

Eco Bags is a fun design and make activity suitable for Years 4, 5 and 6. Children are put in to teams to become bag manufacturing companies for the session and have to plan, design and create bags made from recycled materials whilst learning key business terms.

Children develop valuable skills such as teamwork and communication and are able to utilise their numeracy, literacy and design skills whilst discovering how creative and inventive they can be with old materials that they may well have just thrown away!

Towards the end of the activity, the teams prepare a presentation to pitch their companies and their products to a panel of judges. Certificates are then awarded for teams winning various categories.
